#### RANGE COMPOSITION

A range of hoods supplementing the 'inductive emission' principle and automatic filter washing.
Untreated air is introduced inside to partly compensate for that removed. This results in better drawing of fumes towards the filter surface and reduced air-treatment costs. The inside filters have water sprayer nozzles controlled by the special panel which controls washing functions. The range consists of hoods with 5 different lengths (2400, 2800, 3200, 3600 and 4000 mm) and 2600 mm deep.
